PROFILE

Software engineer with 10+ years in production web systems, now building agentic AI systems for software modernization. Designs the system around the model: orchestration, context and tool boundaries, retrieval architecture, evaluation and verification gates that keep generated work reviewable.

EXPERTISE

AI ENGINEERING

AI Agents LLMs RAG
Agentic Workflows MCP LLM Evals
Context Engineering

SOFTWARE

Python TypeScript Node.js React
Next.js

ARCHITECTURE

AI Modernization Micro-frontends
Design Systems Storybook
API Integration

DELIVERY

Docker CI/CD Playwright
GitHub Actions

LANGUAGES

Spanish Native
English Fluent
French Working

EDUCATION

Bachelor of Computer Science
University of Puerto Rico

Bachelor of Fine Arts
Academy of Art University

EXPERIENCE

TECDATA

AI Engineer · Madrid, Spain

AI-powered software modernization for Carrefour

- **Designed agentic modernization workflows** decomposing legacy migration into discovery, contract-reconstruction, conversion and verification agents.
- **Architected the orchestration layer:** tool contracts, context boundaries, deterministic checkpoints and resumable runs that survive interruption.
- **Built RAG and context-isolation architecture** separating reusable engineering knowledge from application-specific legacy context.
- **Established verification-first pipelines** — characterization tests, contract checks, Playwright UI and accessibility validation — gating every migration.
- **Delivered migration pilots** with Claude Code, OpenAI Codex and MCP servers, under human approval gates at architectural and release decisions.

Sep 2026 – Present

Builder's FirstSource

Senior Software Engineer · Dallas, TX

- Architected a React, Redux and Node.js Progressive Web App for daily warehouse scanning operations.
- Implemented micro-frontends with Webpack Module Federation and scaled a Storybook component catalog and design system.
- Introduced AI-assisted development under a mandatory human-review gate, mentoring engineers on pairing AI velocity with SOLID design.

Oct 2019 – Jul 2026

Sngular

Senior Software Engineer · Dallas, TX

- Built a shared web component catalog and design system for banking clients.

May 2019 – Oct 2019

Everis

Software Engineer · Dallas, TX

- Built Balance Transfer and ACH features for a banking origination platform.

May 2018 – May 2019

SELECTED PROJECTS

Pathfinder ➤ Agent orchestration kit for multi-agent delivery — Git worktrees, agent claims, verification gates, resumable state. On npm.

Forge ➤ Local LLM inference SDK and CLI for Ollama and Qwen models (TypeScript) — config validation, timeouts, metrics. On npm.

LAMA Local-first AI assistant on Forge (Next.js, React), self-hosted.
