SUMMARY

Full-stack Senior Software Engineer with 10+ years building production frontend and backend — specializing in component-driven architecture, design systems, and micro-frontends. Currently focused on integrating AI-assisted development into the engineering lifecycle, always under a human-in-the-loop review process that protects code quality, system security, and architectural integrity. Bridges strong fundamentals (SOLID, clean code, semantic HTML, accessibility) with a pragmatic, security-conscious approach to AI tooling.

EXPERIENCE

Builder's First Source | Dallas, TX

Oct 2019 – Present

Senior Software Engineer

- ▶ Architected and shipped a Progressive Web App (PWA) for warehouse scanning using React, Redux, and Node.js services, used daily across distribution operations.
- ▶ Built and scaled a web component catalog with Storybook, leading the shift to component-driven development and a shared design system.
- ▶ Implemented a micro-frontend architecture via Webpack Module Federation, enabling independent team deployments without sacrificing a unified app shell.
- ⚡ Introduced AI-assisted development into the team workflow — Claude Code, MCP servers, and context engineering for scaffolding, refactoring, and faster reviews — under a strict human-review gate for every AI-generated change.
- ✓ Mentored engineers on pairing AI-assisted velocity with SOLID design, helping the team adopt AI tooling deliberately rather than reflexively.

Sngular | Dallas, TX

May 2019 – Oct 2019

Senior Software Engineer

- ▶ Contributed to a comprehensive web component catalog with an integrated component generator and design system, used across multiple banking clients.
- ✓ Enabled client teams to consistently achieve brand-specific look and feel while reusing a shared underlying architecture.

Everis | Dallas, TX

May 2018 – May 2019

Software Engineer

- ▶ Designed and developed features for an internal banking application used to originate accounts and credit cards.
- ▶ Built features for the Balance Transfer and ACH product, handling sensitive financial data and realtime transactions while improving speed and security.

EDUCATION

- ◆ Bachelor of Computer Science — University of Puerto Rico
- ◆ Bachelor of Fine Arts — Academy of Art University
